

Timer for Mac – Press Release

Version 26 brings precision, flexibility, and professional-grade time management tools to macOS.

Apimac today announced the launch of Timer for Mac, version 26, a professional stopwatch, countdown, and alarm app designed for students, creators, researchers, and professionals. With a clean macOS-native interface and advanced customization options, Timer combines accuracy and flexibility to deliver one of the most powerful time management experiences available on Mac.

A New Standard in Time Management

Standard timer apps often lack the precision, reliability, and depth needed by professionals. Timer for Mac addresses this gap by delivering hundredth-of-a-second accuracy, scheduled and repeating timers, and advanced customization features that adapt to a wide range of real-world needs. From productivity workflows to classroom presentations and research experiments, Timer provides unmatched control over time.

Key Features

- Scheduled and repeating timers with flexible rules
- Live adjustment: add or subtract time while a countdown is running
- Customizable stopwatch chimes at user-defined intervals
- Advanced end-of-time actions: play sounds, speak messages, open apps, launch web pages, or send HTTP requests
- Real pre-execution action testing (not just demos)
- Full-screen presentation mode with themes, transparency, and audience messages
- Precision logging and multilingual support

Built for Real-World Use

Timer adapts to multiple scenarios: it helps students manage focused study sessions, enables professionals to track projects, assists fitness enthusiasts with repeating timers, supports teachers with classroom-visible countdowns, and provides researchers in laboratories with accurate timing and flexible logging. It is a true all-in-one solution.

“With Timer, we wanted to create the most flexible and accurate time management app for Mac users, from classrooms to research labs. Our goal was to deliver reliability and depth without sacrificing ease of use,” said the Apimac team.

Availability

Timer for Mac (v26) will soon be available on the Mac App Store as a free download. Premium functionality can be unlocked through auto-renewable subscriptions (monthly

and annual) or a one-time lifetime purchase option. Subscriptions renew automatically unless cancelled at least 24 hours before the end of the period.

About Apimac

Apimac is a long-standing developer of Mac software, focused on building reliable, intuitive, and professional-grade applications for productivity and creativity. With decades of experience in the Apple ecosystem, Apimac continues to deliver apps that combine innovation, ease of use, and technical excellence.
